YETTER

FOREWORD

You've just joined an exclusive but rapidly growing club.

For our part, we want to welcome you to the group and thank you for buying a Yetter product.

We hope your new Yetter products will help you achieve both goals-increase your productivity and increase your efficiency so that you may generate more profit.

This operator's manual has been designed into four major sections: Foreword, Safety Precautions, Installation Instructions and Parts Breakdown.

This **SAFETY ALERT SYMBOL** indicates important safety messages in the manual. When you see this symbol, be alert to the possibility of **PERSONAL INJURY** and carefully read the message that follows.

The word **NOTE** is used to convey information that is out of context with the manual text. It contains special information such as specifications, techniques and reference information of a supplementary nature.

The word **IMPORTANT** is used in the text when immediate damage will occur to the machine due to improper technique or operation. Important will

apply to the same information as specified by note only of an immediate and urgent nature.

It is the responsibility of the user to read the operator's manual and comply with the safe and correct operating procedure and to lubricate and maintain the product according to the maintenance schedule in the operator's manual.

The user is responsible for inspecting his machine and for having parts repaired or replaced when continued use of the product would cause damage or excessive wear to the other parts.

It is the user's responsibility to deliver his machine to the Yetter dealer who sold him the product for service or replacement of defective parts, which are covered by the warranty policy.

If you are unable to understand or follow the instructions provided in this publication, consult your local Yetter dealer or contact:

YETTER MANUFACTURING CO.

309/776-4111

E-mail: info@yetterco.com

WARRANTY

Yetter Manufacturing warrants all products manufactured and sold by it against defects in material. This warranty being expressly limited to replacement at the factory of such parts or products as shall appear to be defective after inspection. This warranty does not obligate the Company to bear cost of labor in replacement of parts. It is the policy of the Company to make improvements without incurring obligations to add them to any unit already sold. No warranty is made or authorized to be made, other than herein set forth. This warranty is in effect for one year after purchase.

Dealer _____

Yetter Manufacturing warrants its own products only and cannot be responsible for damages to equipment on which mounted.

SAFETY

A brief description of signal words that may be used in this manual:

CAUTION: Used as a general reminder of good safety practices or to direct attention to unsafe practices.

WARNING: Denotes a specific potential hazard.

DANGER: Denotes the most serious specific potential hazard.

SAFETY PRECAUTIONS

You can make your farm a safer place to live and work if you observe the safety precautions given. Study these precautions carefully and insist that those working with you and for you follow them.

Finally, remember this: someone's carelessness, neglect or oversight usually causes an accident.

WARNING

Never clean, lubricate or adjust a machine that is in motion. Always lower or block the implement before performing service

If machine must be serviced in the raised position, jack or block it up to prevent it from accidentally falling and injuring someone.

Check clearance of markers from tractor cab or operator when not equipped with cab.

Do not allow riders on the tractor or implement.

Use speeds and caution dictated by the terrain being traversed. Do not operate on any slope steep enough to cause tipping or loss of control.

Read and understand the operator's manual and require all other persons who will operate the equipment to do the same.

Be familiar with all tractor and implement controls and be prepared to stop engine and implements quickly in an emergency.

Consult your implement and tractor operator's manual for correct and safe operating practices.

Beware of towed implement width and allow safe clearance.

FAILURE TO HEED MAY RESULT IN PERSONAL INJURY OR DEATH.

MARKER APPLICATION CHART

Yetter Part No.	Description	Marker Reach
6150-115	Bi-Fold Marker, 15-20 ft. for 15-20 ft. Drills, 4rN & 6rN Planters etc.	87"-132"
6150-124	Tri-Fold Marker, 24 ft. for 24 ft. Drills	141"-171"
6150-130	Tri-Fold Marker, 30 ft. for 30 ft. Drills, 8rW & 12rN Planters etc.	163"-193"
6150-135	Tri-Fold Marker, 35 ft. for 35 ft. Implements	193"-223"

Various u-bolts and brackets are available for row crop planter applications.

GENERAL INFORMATION

Yetter Drill Markers were designed to operate on grain drills and planters from 14 feet to 35 feet wide. For non-folding grain drills from 14 to 22 feet wide, bi-fold markers are used.

All Yetter Markers are hydraulically actuated. A sequence valve is provided to alternate automatically from left to right marker. After each raise cycle the valve switches hydraulic oil flow to the opposite marker.

Yetter markers were designed for hydraulic systems providing up to 2500 psi hydraulic pressure. For hydraulic systems that have variable flow control, this control may be used to adjust marker speed. It may be necessary to provide restrictors in the lines to reduce marker speed with some tractors.

MOUNTING KIT INSTALLATION

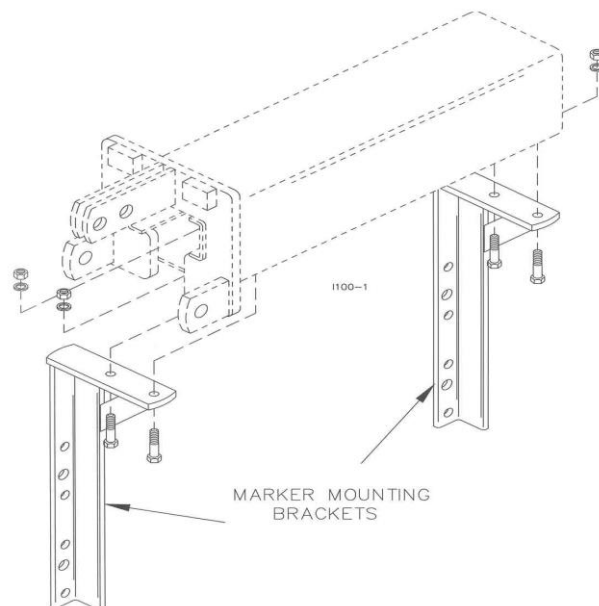

On Great Plains, M & W, Marliss, Tye, IH5200/5400 and JD 750/1560, assemble mounting brackets to front of drill frame as shown using hardware provided in the mounting kit for your particular type of drill. **See appropriate drawing and parts list.**

MARKER INSTALLATION

Mount marker base to mounting brackets using 1/2 x 1-3/4" cap screws, lock washers and nuts. Two sets of holes are provided in the marker base toward the outer end of the drill. Use the hole set that allows clearance of obstruction on the frame for your particular implement.

NOTE: If drill is equipped with a grass seeder attachment, it may be necessary to install a marker extension kit.

INSTALLATION

HYDRAULIC SET-UP FOR MARKERS

HYDRAULIC INSTALLATION

HYDRAULIC HOOK UP

! DANGER: Inspect and replace worn or frayed hydraulic hose. Keep all connections tight, escaping hydraulic fluid under pressure can have sufficient force to penetrate the skin and cause serious injury. Fluid escaping from a small hole can almost be invisible. Use a piece of cardboard or wood rather than hands to search for suspected leaks. Failure to heed may result in personal injury or death.

! WARNING: Lower the cart to the ground, and remove any pressure in the lines before opening the hydraulic lines to install the marker hoses.

1. Connect the port on the front of the sequence valve marked "LOWER" to the tractor or the return side of the drill lift system. If the markers are to lower with a Yetter Coupler Cart, connect this LOWER port to the return side of the cart hydraulic system. This is the bottom port of the right-hand (slave) cart cylinder.

2. **IMPORTANT** – Be VERY careful when first actuating markers with hydraulic pressure. Cycle hydraulics several times only slightly lifting marker off stops. Apply pressure for several seconds in raise position to purge air from hydraulic cylinders. After several cycles, the marker should be completely lowered. When lowering the first time proceed VERY slowly.

NOTE: Air left in the system will compress when pressurized, this may cause erratic and violent damaging motion of the marker arms.

3. Measure the time required for each marker to fold and unfold. If the markers are operating too fast, they must be slowed down to provide adequate life. Bi-fold markers should take more than 4 seconds to fold and more than 4 seconds to unfold. Tri-fold markers should take more than 8 seconds to fold and more than 8 seconds to unfold.

4. Some tractors have a provision to control remote cylinder speed with an adjustment near the remote cylinder ports. If the markers are actuated with a separate tractor valve this adjustment is available.

5. Restricted fittings are provided in all tri-fold markers to prevent damage from folding and unfolding too fast. If markers are too slow drill out the restrictor fitting using a 1/16" drill bit.

6. Adjustable restrictors are also provided in the sequence valve. These are adjusted with the bolts and jam nuts on each side of the sequence valve. Adjustments of the raise speed are made with the bolt on the left side of the valve with "RAISE" stamped vertically above it. Adjustments of the lowering speed are made with the bolt on the right side of the valve with "LOWER" stamped vertically beneath it.

7. Adjustments are made with these bolts by screwing them clockwise into the valve to reduce operating speed or by screwing them counterclockwise to increase operating speed. Adjustments should be made in small increments, 1/6 of turn or less at a time, being sure to retighten the jam nut.

! WARNING: On drills and planters with switch operated hydraulic valves, a new switch operated hydraulic valve should be installed to operate the markers. If the markers are plumbed with an existing switch operated valve they may extend or retract unexpectedly when you press the switch, resulting in damage to equipment or property or possible injury to yourself or others in the vicinity.

SERVICE REPAIR KIT – 2515-349

DISASSEMBLY and ASSEMBLY

If markers do not sequence, clean dirt from valve spool bore (6). If markers tend to creep downward, check for dirt, nicks/scratches in ball check valve areas (16).

Note: Be sure the hoses are connected to the correct ports before disassembling the valve for cleaning or repair. (See schematics.)

Disassembly:

1. Remove hex head plugs (1), springs (2), and steel balls (16 & 17).
2. Remove plug (3), spring (2), steel ball (17).
3. Remove plugs (7) from each end of body.

Important! Be sure plugs, springs and balls (Step 1 and 2) are removed before attempting to remove spool.

4. Carefully remove spool (6) from valve body.
5. Remove flow restrictor assembly (15) from valve body.

Inspection:

1. Clean spool and restrictors in solvent.
Note: Restrictor disassembly is not required for cleaning.
2. Clean valve body after checking exterior for signs of o-ring leakage.
3. If spool is nicked or scratched, remove with crocus cloth. Spool must slide freely in bore.
1. If ball seats are nicked or scratched, install larger ball against seat, tap ball with brass rod to "seat" ball.

Note: Remove spool for this procedure.

2. Inspect o-rings. Replace if necessary.

Assembly:

1. Apply clean hydraulic fluid to threads, o-rings, spool, valve bore. Reassemble in reverse order of disassembly.
2. Open restrictors one turn minimum.
3. Install valve on planter and readjust marker operating speed with restrictors.

Marker Operation

Markers fail to sequence

Valve spool stuck in sequence valve

Disassemble valve and clean spool

Raised marker slowly lowers

Check ball not seated in

Disassemble valve and re-seat ball

MARKER DISC ASSEMBLY

1. Loosen the two 1/2" bolts on the outer end of the marker slide tube and adjust the marker disc brackets to desired angle and retighten.

OPTIONAL 6100-334 – MARKER WEIGHT

MAINTENANCE

Lubrication Intervals

There are three grease zerks on the bi-fold marker and eight grease zerks on the tri-fold marker. (See drawing). Grease every 50 hours. Grease the hub on each marker disc assembly every 50 hours.

IMPORTANT: The recommended service intervals are based on normal conditions; severe or unusual conditions may require more frequent lubrication.

Perform each lubrication and service procedure at the beginning and end of each season.

Clean grease fittings before using grease gun, to avoid injecting dirt and grit into the bearing. Replace any lost or broken fittings immediately. If a fitting fails to take grease, remove and clean thoroughly, replace fitting if necessary. Also check for failure of adjoining parts.

MAINTENANCE

Lubrication

CAUTION: To help prevent serious injury or death to you or others caused by unexpected movement, service machine on a level surface. Lower machine to ground or sufficiently lock or block raised machine before servicing. If machine is connected to tractor, engage parking brake and place transmission in "PARK", shut off engine and remove key. If machine is detached from tractor, block wheels and use shop stands to prevent movement.

CAUTION: Do not clean, lubricate, or adjust machine while in motion.

Use grease based on NLGI consistency numbers and the expected air temperature range during the service interval.

Use a **multi-purpose polyurea, water resistant, moderate speed, and NLGI grade #2** grease.

Other greases may be used if they meet the following **NLGI Performance**

IMPORTANT: Some types of grease thickener are not compatible with others. Consult your grease supplier before mixing different types of grease.

Alternative Lubricants

Conditions in certain geographical areas may require special lubricants and lubrication practices which do not appear in the operator's manual. If there are any questions, consult Yetter Manufacturing Co. to obtain latest information and recommendation.

Storing Lubricants

Your machine can operate at top efficiency only if clean lubricants are used.

Use clean containers to handle all lubricants.

Store them in an area protected from dust, moisture and other contaminants.

Storing the Equipment

Store the machine in an area away from human activity

Store machine in **RAISED** position.

Install service locks on all wheel cylinders.

At the end of the season, the machine should be thoroughly inspected and prepared for storage. Repair or replace any worn or damaged components to prevent down time at the start of the next season. Store machine under cover with all parts in operating condition.

- Clean machine thoroughly to remove all dirt, debris and crop residue, which would hold moisture and cause rusting.
- Inspect machine for worn or broken parts. See your Yetter Farm Equipment dealer during the off-season so that parts or service can be acquired when machine is not needed in the field.
- Lubricate bearings as outlined in the Lubrication section
- Paint all parts which are chipped or worn and require repainting.
- Store machine in a clean, dry place with the planting unit out of the sun.
- If the machine cannot be stored inside, cover with a waterproof tarpaulin and tie securely in place.
- Do not allow children to play on or around the machine

6150-111 - STANDARD WITH
6001-031 & 6150-162 MOUNTING KITS

TROUBLESHOOTING

Problem	Cause	Solution
Markers do not function correctly	Markers raise and lower voluntarily	<p>Check tractor hydraulic system</p> <p>Check hydraulic hose couplings</p> <p>Purge air from hydraulic system see Installation: hydraulic hoses</p> <p>Hydraulic cylinder failure, repair as necessary</p> <p>Check sequence valve for dirt or damage.</p>
Marker blade does not leave good enough mark	Blade not moving sufficient dirt	<p>Adjust angle of blade to be more aggressive.</p> <p>Use notched marker blade, 6001-495. (6001-610 w/depth band assembly.)</p> <p>Reverse blades on hubs to push dirt out.</p>
Both markers activate at same time	Sequence valve not operating	<p>Air in hydraulic lines</p> <p>Check for dirt in spool or replace sequence valve</p>
Marker blade digging too much dirt	Blade set at incorrect angle	Adjust angle of blade to be less aggressive
Tri-fold marker will not raise from operating position	Not enough hydraulic pressure	<p>Check and repair tractor hydraulic pump (2400 PSI minimum)</p> <p>Replace hydraulic cylinder with $\frac{1}{2}$" larger diameter cylinder. Example: replace a 3" x 8" cylinder with a 3-1/2" x 8" cylinder</p>

PARTS IDENTIFICATION

6150-111 MARKER HOLD DOWN KIT

DET	QTY	PART NO.	DESCRIPTION
1	2	2570-448	.120 BOWTIE LOCKING COTTER
2	2	6150-385	OUTER ARM LOCK BRKT
3	2	2984-320	PIN, SKID ADJUSTMENT ZYD
