Yetter
70 Years Of Solutions

Inject Your Manure Deep with Controlled Soil Disturbance

Place liquid manure deep into the soil with the New Yetter Avenger™ coulters injection system. The deep placement of the Avenger system allows maximum utilization of nutrients and fertilizer from the manure.

Livestock producers will save time and money with its reduced draft, dependable construction and its ability to effectively manage high volumes of liquid manure.

By using a narrow 3" drop tube the pressurized liquid is put into a narrow trench cut in the soil by the coulters. The integrity of the soil is maintained for conservation tillage practices and valuable crop residue is undisturbed to control run-off and erosion.

Each coulters system, in conjunction with its spring tension nylon wheel and steel wear plate positioned at an angle to the coulters, protects the injection tube, cleans the coulters and directs the manure into the soil cut.

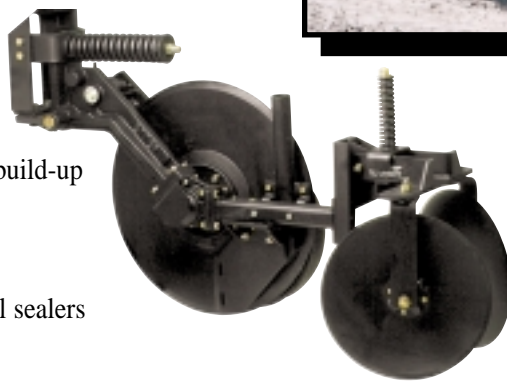

The Yetter Avenger coulters injection system is designed to eliminate the plugging and dragging that occurs with big knives and shanks. Its heavy duty cast linkage construction maintains even spacing and delivers clean precision placement of liquid manure that is ideal for all tillage conditions, even for side dressing.

The Yetter Avenger system is spring cushioned and uses tapered roller bearings for long life. It fits 5" x 7" or 7" x 7" toolbars and is available with optional disc or residue wheel sealers which virtually eliminate odor.

As the innovative leader in fertilizer placement and seeding management, Yetter offers the agricultural community over 60 years of profitable solutions for everyday farming problems.

Yetter Avenger™ -- series #2986

- For deep placement of manure with minimal loss of ground cover and soil disturbance in all tillage conditions
- Maximizes the nutrients and fertilizer value of manure
- Reduces draft to save time & fuel
- Ideal for side dressing
- 25" coulters blade set at 5° angle for clean soil cut
- Narrow 3" drop tube with protective wear plate
- Heavy-duty cast linkage maintains uniform spacing & stability
- Nylon wiper wheel with spring pressure eliminates blade soil build-up
- Fits 5" x 7" or 7" x 7" toolbar
- No knife or shank to plug
- Approximate weight 253 lbs
- Optional Disc or Residue wheel sealers virtually eliminate odor

The new Yetter Avenger puts manure deep into the soil with less draft and minimal soil disturbance.
