

## New Product

FOR IMMEDIATE RELEASE

### New Seed Station Bulk Handling System

Save time and labor costs when handling bulk seed with the Seed Station™ bulk storage and retrieval system from SystemsOne - a Yetter Company.

The Seed Station™ easily stores and retrieves seed from multiple 100 bushel poly tanks. These high-capacity tanks are mounted on tubular steel frames which can be set on the ground, on a flatbed truck or on wheels for mobility on hard surfaces for easy access.

A moveable Seed Jet II™ air delivery system slides from tank to tank for easy unloading into a planter, drill or grain wagon. The Seed Jet II™ uses an industrial plus 11hp engine to power a blower assembly which generates a stream of air. The air stream carries the seed through a 35' stainless steel tube to a decelerator where it is gently swirled into a planter or drill box. There's no repositioning necessary like with auger systems.

The Seed Station™ saves valuable time during planting season. With the easy-to-handle Seed Jet II™, tests have shown you can fill a 23 row planter in 7 minutes. The Seed Station™ has been proven safe for soybeans, corn, wheat, edible beans and rice.

"We're giving customers the tools to build the seed handling system that is most effective for them," said Gene Chenoweth of the SystemsOne research and development department. "The Seed Station™ has incorporated the seed delivery speed of the Seed Jet II™ with weather tight stor-

age and flexibility of the poly tanks. The pay back to the farmer comes in reduced labor costs and more time to plant during that time-critical season. Best of all, there are no seed bags to rip open, lift and then dispose of."

The Seed Station™ includes metal walkways and ladders for easy access to the tank's weather tight screw tops. The Seed Jet II™ slides effortlessly along a trolley for positioning under the proper tank. There is never confusion about which tank is providing seed, which reduces the chance of using the wrong seed.

SystemsOne produces the industries largest selection of bulk seed handling products, including the Seed Partner™, Seed Box Train™ and Seed Box Partner™, in addition to the Seed Station™ and Seed Jet II™ .

*The Seed Station™ bulk seed storage and retrieval system - NEW from SystemsOne.*
