Yetter Manufacturing Floater Wheels Enhanced With Soil Shield

Easy-to-install option prevents soil buildup

Floater wheels from Yetter Manufacturing are an excellent option to add to residue managers to ensure depth control in many soil conditions. Now, Yetter has improved its 2967 Floater Wheels by adding the 2966-199 Soil Shield.

The Soil Shield option bolts onto each Floater Wheel to prevent soil from building up in the dish design of the wheel. “No soil can enter the wheel ring and stick to the Floater Wheel when the shield is attached,” said Andy Thompson, an

AOR manager for Yetter. “Too much wet soil buildup adds extra weight or allows residue to stick to the wheel. The Soil Shield is a simple solution.

“In worked soil, the soil shield decreases the possibility that the dish-shaped Yetter Floater Wheel will pitch soil into adjacent row,” continued Thompson.

Constructed of lightweight poly, the cover bolts on and can easily be removed. The new 2966-199 Soil Shield can be retrofitted to the existing Floater Wheel design.

Profitable Solutions for Production Agriculture

Established in 1930 and based in Colchester, Illinois, Yetter Manufacturing Company is the industry leader in planter attachments that boost productivity and profitability. Yetter makes a variety of coulters, residue managers, precision fertilizer placement products, markers, and bulk seed handling devices.
