

## New Product Information

### Newest Titan Model Works Well With John Deere Coulters

View the 2967-043 on the Yetter Web site.

The power of Yetter Farm Equipment's Titan™ residue managers joins forces with the company's popular screw adjust feature in a new model, the 2967-043 Titan With Screw Adjust for John Deere coulters.

"Titan residue managers are well-known for their ability to float over the soil surface and achieve optimum contact," said AOR Manager Scott Cale. "And the addition of the screw adjust provides constant, accurate depth control."

The 2967-043 has been designed to work in conjunction with John Deere unit-mounted, no-till coulters. "This design allows means producers' John Deere coulters and residue managers work together without interference to coulters adjustment," said Cale.

The screw adjust feature is easily controlled with a self-detent adjustment handle, speeding up the adjustment process so producers spend more time planting and less time fine-tuning equipment.

In addition to the floating feature, the residue manager wheel can be locked into place for positive wheel traction in tough conditions. Residue is cleared from the seedbed but left between the rows, which contributes to the creation of an ideal seedbed and earlier plant emergence.

The 2967-043 can also be used when the coulters blade is removed, adding flexibility for producers to adapt to various situations and changing needs.

As with all Titan residue managers, the 2967-043 Titan can be used with other Yetter wheel configurations, such as 2967-186 Floater Wheels and the SharkTooth® Wheel, an option to add enhanced residue cutting power.

## Profitable Solutions for Production Agriculture

Established in 1930 and based in Colchester, Illinois, Yetter Manufacturing Company is the industry leader in planter attachments that boost productivity and profitability. Yetter makes a variety of coulters, residue managers, precision fertilizer placement products, markers, and bulk seed handling devices.
