

New Product Information

Popular Yetter Stalk Devastator Available for Several Corn Head Models

The 5000 Stalk Devastator™ from Yetter Farm Equipment, recognized by Farm Industry News as one of the most innovative agricultural products of 2012, is now available to fit more corn head models. This stalk roller crushes tough corn stalks as it rolls through the field, preventing premature tire damage. The Devastator also earned an honorable mention in the residue management category at No-Till Farmer's 2013 National No-Tillage Conference.

Devastator models are now available to fit 6, 8, and 12-row Geringhoff and Drago combines. "The Devastator is already the ideal stalk residue management solution for producers across the country," said Yetter Territory Manager Jeff Wherley. "Yetter is pleased to make this money-saving tool available to growers operating even more combine brands." The Devastator is also available to fit most John Deere and CNH combines.

The rollers on the Yetter 5000 Stalk Devastator push stalks over, crushing them, which allows tires or tracks to easily roll over the stalks. "Today's hybrids are designed to resist disease, insects and wind, but the tough stalks are destroying tires. This leads to downtime and expensive replacement," said Jim Lascelles, service manager at Yetter Farm Equipment. "With the price of tires and tracks at an all-time high, producers are looking for ways to make them last longer."

The Devastator's rollers successfully reduce stubble damage to the tires, wires and hydraulic hoses on seeding and tillage implements, combines, trucks and tractors, all while preserving enough ground cover to ensure growers still get the erosion-prevention benefits associated with residue. The crushed stalks, when knocked over, have more contact with the soil than if left standing, facilitating quicker plant tissue breakdown.

The spring-loaded, solid-steel Stalk Devastator is quick and easy to install. It is designed to not interfere with most header transport carts.
