

## New Product Information

### New Features Added to Yetter 6200 Firming Wheel

When it comes to sealing the seed opening, there are plenty of options on the market, but it's the Firming Wheel from Yetter Farm Equipment that takes seed trench closing to the next level. With two new features, the 6200 Firming Wheel is now even more efficient.

- A new poly adjustable scraper prevents buildup.
- The addition of a pin-up feature makes it easy to raise the wheel.

The Firming Wheel complements closing wheels by gently firming the seed zone, which helps create an ideal seedbed. "A perfect seed environment is the result," said Yetter Territory Manager Andy Thompson.

"Spike closing wheels are great to eliminate sidewall compaction and loosen the soil beside the seed, but field conditions vary, and in some situations, the seedbed may still be less than ideal," Thompson explained. "If producers who are experiencing challenging soil conditions add Yetter Firming Wheels to their planters, a more uniform growing environment can be created." The 6200 Firming Wheel has four adjustable spring pressure settings so the wheel can be set to the field condition.

The Yetter Firming Wheel also helps prevent air pockets and excessive moisture loss in the seed trench. These benefits, combined with its ability to create a uniform growing environment and a welcoming seedbed, result in even emergence. "Producers know even emergence is one of the biggest keys to maximizing yields," said Thompson.

Growers currently using a setup with either one or two spike closing wheels should consider adding a Firming Wheel as a solution to firm up the seed zone and help prevent moisture loss. Its benefits won't disappoint producers looking to increase the effectiveness of their closing wheel systems.
