Keep Nitrogen in Place With New Attachment From Yetter

Making the most of fertilizer investments is on the top of producers' minds as overall input costs continue to rise. The new 6200-060 N Keeper™ from Yetter Farm Equipment seals the slot that is opened during fertilizer application, helping ensure growing plants can take full advantage of either pre-plant or side-dress applied N.

The N Keeper is designed to attach to the Yetter 2995 or 2996 Parallel Linkage or single arm Fertilizer Coulters. "By adding the N Keeper to seal the slot cut by the coulter, growers can prevent their fertilizer from evaporating," said Jared Head, Yetter territory manager.

The N Keeper features an adjustable down stop to set down travel of the closing wheel. The spring pressure has three settings for different conditions. The N Keeper's closing wheel angle is also adjustable so the proper aggressiveness can be maintained in various tillage conditions. An 11" cast closing wheel with bevel is standard on the N Keeper; other closing wheel options are available.

"As farmers look to make continuous improvements in their operations and increase their bottom lines, the N Keeper is another product of choice," said Head.
