

**FURROW  
 MAX™**

**CLOSING SYSTEM**

Achieve better emergence and improve crop stands with the two-stage Furrow Max Closing System. With multiple pressure settings that operate independently, the Furrow Max is the clear choice to help growers overcome challenging planting conditions.

Stage 1: Closing discs successfully eliminate the compacted seed trench sidewall, then press soil firmly back around the seed.

Stage 2: The pressing action of the firming wheel reduces air pockets, increasing crucial seed-to-soil contact and conserving moisture.

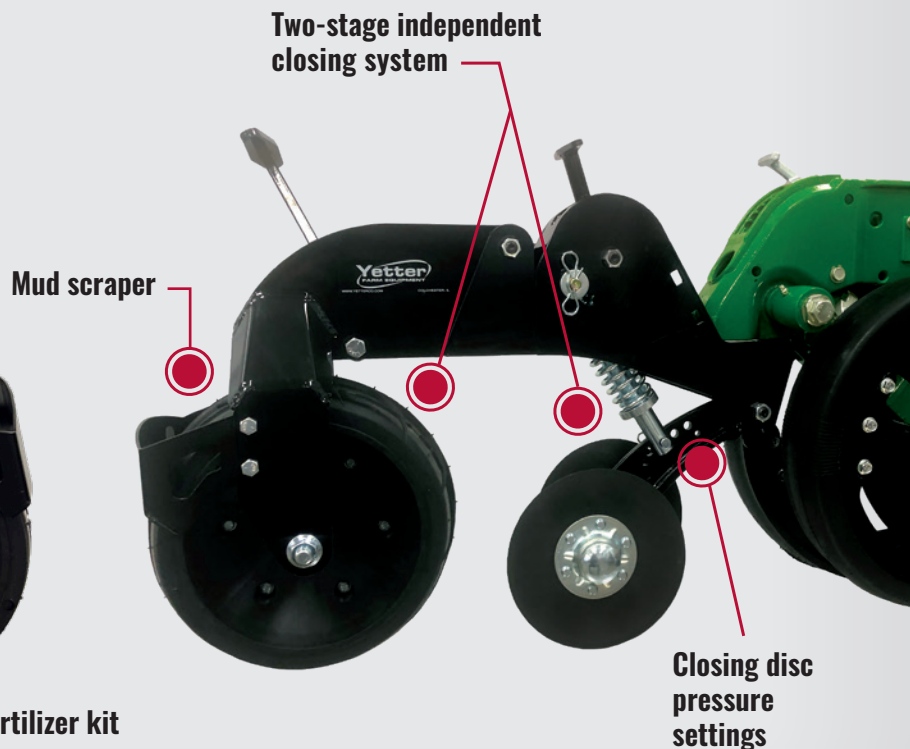

**6200 FURROW MAX FEATURES**

- » With true independent suspensions, firming wheel travels completely independently of the closing discs
- » Offers four down pressure settings for closing discs and firming wheel
- » Capable of housing 8" or 9" closing discs, in smooth, serrated, or SharkTooth®
- » Standard 6.5" chevron-patterned firming wheel can be removed and replaced with a V closing wheel
- » Optional liquid fertilizer kit available

Adjustable down pressure T handles

Optional liquid fertilizer kit

Mud scraper
