2969 IntelliNject™ FERTILIZER OPENER

**Maximize yield potential and
plant uniformity**

Fertilizer is an investment that promotes healthy, uniform plants, and that helps increase yields. The IntelliNject Fertilizer Opener places two bands of liquid fertilizer in the soil surface for early root interception and usage.

Consistent placement on both sides of the seed

- » Places liquid fertilizer behind the planter closing wheels
- » Follows the ground contour during planting
- » Air cylinder allows in-cab adjustments to downforce or allows unit to raise when not in use
- » Provides placement of fertilizer up to 1 1/2" deep and 2"-3" off the row
- » Drag chain helps close the disc opening and cover the seed trench
