

NEW! AIR ASSIST CYLINDER

Easily adjust row cleaners during planting.

The Air Assist Cylinder utilizes Yetter in-cab control systems for floating row cleaners—whether those row cleaners are running on a planter or as part of a strip-till system. Using air supplied through electric or hydraulic compressors, you can quickly and easily make adjustments from the tractor seat based on your field conditions. This saves time and improves the performance of your row cleaners, setting your crop up for uniform emergence and better yields.

2967-0001 AIR ASSIST CYLINDER

- » Adjust the up and down pressure air kit from the tractor seat
- » Repairable cylinder uses high-quality internal seals and external scraper for improved longevity
- » Compatible with Yetter 2967-029/097 Short Floating Row Cleaner, 2967-013/014 Short, Narrow Floating Row Cleaner, coulter combination row cleaners, and other row cleaners when ordered with cylinder mount kits
- » System enables raising and lowering row cleaners with the push of a button
