

AIR ADJUST™ ROW CLEANER

SINCE
1930

Planting conditions change each year. Field conditions vary. Be in control with the Yetter Air Adjust Row Cleaner.

The Air Adjust Series of products lets you make real-time adjustments. With pneumatic in-cab settings, up and down air bags allow the row cleaner to float and follow the soil contour. You'll move the right amount of residue, clods, rocks, and dry soil from your seed row for ideal seed-to-soil contact.

COVER MORE ACRES IN LESS TIME

When you're in the field, getting out to adjust your row cleaners takes discipline and costs valuable time. But if you let them run incorrectly, you could:

- Hairpin residue against seeds
- Move soil instead of residue

Hairpinning is especially costly because it can lead to late emergence, diseases, tied-up nutrients—and a loss of profitability.

With the pneumatically controlled Air Adjust Row Cleaner, you can respond instantly to the unique and changing conditions of your field, without ever leaving your cab. Adjustments are made with a touchscreen and done in seconds. Not only will you be set up for better yields, you'll cover more acres in less time and boost your profitability.

SPOTLIGHT ON THE AIR ADJUST AND CONTROLLER CAPABILITIES

IN-CAB CONTROLS

On-the-go technology

- Change up or down air pressure in less than a second with the push of a button or the turn of a knob
- Five presets can be programmed for quick changes; for example, save custom settings for light, medium, and heavy residue
- Utilizes an in-cab screen or integrates with existing ISOBUS monitor to control functions of 2940 products; both options support Wi-Fi connection

Wi-Fi controls for tablet or iPad

Ag Leader ISOBUS option

Case IH ISOBUS option

John Deere ISOBUS option

LOOKING FOR TIPS ON
SETTING AND ADJUSTING
YOUR ROW CLEANERS?

ROW CLEANERS PROVIDE ROI

Row cleaners top the list when it comes to planter upgrades.
Properly set row cleaners improve planter performance and seed emergence by:

Moving residue out of the row
without engaging too much soil

Creating a smooth ride for gauge
wheels, reducing planter bounce

Clearing the way for consistent
seeding depth and even emergence

Delivering ROI through better crop
stands and higher yields

AIR ADJUST SERIES: BEYOND THE ROW CLEANER

Yetter Farm Equipment offers a whole lineup of Air Adjust products so you can meet the needs of your planting operation.

- 2940 Row Cleaner - wide and narrow row widths available
- 2940 Coulter/Row Cleaner Combo
- 2940 In-Cab Controller
- 2940 Hydraulic or Electric Compressor Options

TESTIMONIALS**

WHAT OUR FARMERS SAY

"We are constantly adjusting our row cleaners as we go through the field, because making little changes can affect the whole year's crop. Getting out three or four times, it gets old. We have a limited window of time to plant, so the time saving is great. With Air Adjust Row Cleaners, I just hit a button and they go to the preset I've saved."
