

2984 STRIP FRESHENER CC

SINCE 1930

Fast & Efficient Strip-Till

The Yetter **2984 Strip Freshener CC** addresses common challenges strip-tillers face, like unfavorable field conditions, weather, and time. It offers the perfect amount of controlled tillage to create the ideal seedbed, with the option of placing liquid or dry fertilizer in the strips.

The Strip Freshener CC adds from-the-cab control for quick adjustments to row cleaners, rolling baskets, and row unit down pressure.

WHAT OUR FARMERS SAY

“I once heard a quote about farming that has stuck with me: ‘Raising crops is a biological process and quite hard to control. It’s not a manufacturing process. It’s really all about reducing risk and variability.’”

“The Yetter 2984 Strip Freshener CC is an integral part of our strip-till system that helps us reduce that risk and variability by preparing a uniform and favorable environment for our planter to run in. We have been strip-tilling in one form or another since the late nineties, and we began using the Yetter Strip Freshener units over 10 years ago. We have found them to be durable and easy to use. The ability to fine-tune adjustments with the CC units results in a high-quality strip that gives our corn crop the best opportunity for success through a uniform seedbed that yields uniform emergence.”

- John Green, Illinois

“We wanted to switch to strip-till, but we were concerned about how well it would work on our 20” rows, especially for our corn-on-corn acres. The Yetter team helped us understand and create a complete strip-till system. We custom-built a strip-till toolbar using Yetter 2984 Strip Freshener CC row units—it saved us money and fit our operation.”

“Our 325 horsepower tractor and 24-row strip-till bar have allowed us to drastically reduce our time, labor, and costs of putting in the crop, while achieving better fertilizer placement and making a better seedbed than we did with our previous system.”

“The versatility of the 2984 Strip Freshener CC allows us to run whenever it works, and the in-cab adjustment allows us to keep rolling while maintaining high performance. The speed, performance, and versatility of the 2984 Strip Freshener CC has exceeded our expectations.”

- Kale Carlisle, Illinois

THE STRIP FRESHENER DIFFERENCE: HOW IT WORKS

The versatile Strip Freshener CC can be used in the spring or fall to freshen existing strips or create new strips in untilled soil. It is also equipped to clear residue and precisely place fertilizer—all in one pass.

- 1. Clearing residue:** Floating row cleaners attach to the front of the 2984 Strip Freshener CC, clearing residue out of the planting zone before tillage. This prevents hairpinning and residue being buried in the planting zone, which can lead to an inconsistent seedbed.
- 2. Building or reviving strips:** The Strip Freshener CC operates at 6–10 mph and has a depth adjustment range of 1 1/2”–4”. Three blades mix soil while rolling baskets condition the 10” wide strips, creating a consistent seedbed to plant into. Cleared of residue, the strips can easily warm up and dry out before planting.
- 3. Placing fertilizer:** Add fertilizer application equipment to place liquid or dry fertilizer in the new or revived strips.

BUILD A SYSTEM TO FIT YOUR NEEDS

DURAPLACER TOOLBAR SETUP

Available in 16- or 24-rows and 1,800–2,400 gal. liquid or 9–14 ton dry fertilizer options.

3-POINT YETTER TOOLBAR SETUP

Factory-assembled for Yetter toolbar options.

PLANTER TOOLBAR SETUP

Universal mounting bracket fits 4" x 6", 5" x 7", 6" x 6", and 7" x 7" toolbar sizes.

DATA & ROI

After a three-year study, the Yetter 2984 Strip Freshener earned the designation of PFR Proven. In both corn and soybeans, using the Strip Freshener in the spring resulted in a yield advantage of **2.6 bu./acre in corn and 2.2 bu./acre in soybeans**. The study noted the success of the Strip Freshener for spring tillage, as well as the advantage achieved when the strip is allowed to warm and mellow before planting.

Beck's Practical Farm Research provides unbiased, farmer-focused research through studies conducted across the Midwest. A Beck's PFR Proven product or practice provides a positive yield increase during three or more years of testing. Products must average a positive return on investment during that time.

VIEW THE STUDY

**Please remember yield results vary based on many factors each year. Always consider your unique operation when deciding what equipment to invest in. Data found here is only a starting point.*

THE STRIP FRESHENER CC LEADS TO MAXIMIZED EMERGENCE

When the Strip Freshener prepares strips, emergence is uniform, maximizing your seed investment and leading to higher yield potential.

Without the Strip Freshener, the impact of cooler soil temps and inconsistent seed placement on emergence is much more prevalent.

YETTER OFFERS A FULL LINEUP OF STRIP-TILL PRODUCTS

Yetter has more than 30 years of strip-till experience. In this in-depth video, we explore the four models we offer to fit the needs of different strip-till operations.
