*DISC OPENERS- Available to purchase in a **MINIMUM of 10-piece increments**

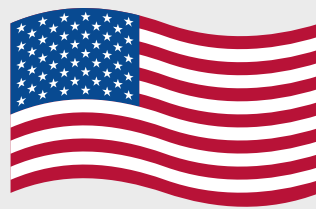

Precision machined, hardened,
inner bushing: Designed to be a
wear point.

Precision machined, hardened
outer bushing.

GBGI HEAVY DUTY PARALLEL ARMS & CLOSING TAIL CASTINGS

- Complete with hardened bushing system, precision machined and heat treated so that the outer bushing is slightly harder than the inner pivot bushing.
- Eliminates the need to replace parallel arm & closing tail castings. Replace only inner bushings after a significant period of time.
- Castings and hardware are all manufactured in the USA.

InPHInium Disc Blades are a premium line of seeding discs.

Featuring proprietary steel, extends wear life by 20–30% without sacrificing the flexibility required to avoid breakage in tough, rocky soils.

Premuim double & single row sealed ball bearings

GBGI INPHINIUM DISC OPENERS

- **Maximum Durability:** The specialized formulation and heat treatment allow these blades to outlast standard industry blades while maintaining a sharp working edge for longer service life.
- **Breakage Resistance:** Despite the high Rockwell hardness, the discs undergo the strict "ball test" to guarantee they can absorb heavy, continuous impacts in the field without bending or breaking.
- **Runout and wobble:** Laser checked and dial indicator checked to ensure axial runout or wobble does not exceed .045". This is the tightest tolerance in the industry.
