## ROW CLEANERS

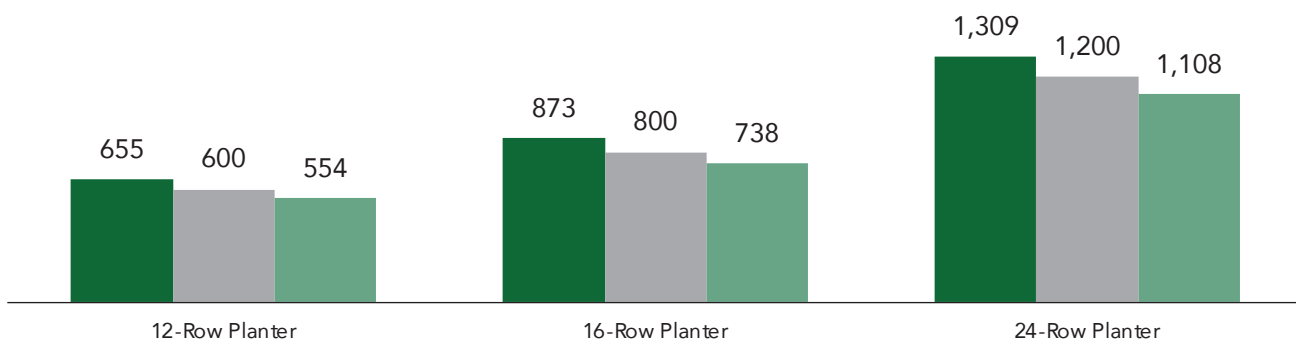

### WHY SHOULD I INSTALL ROW CLEANERS ON MY PLANTER?

Row cleaners move residue out of the way of the planter gauge wheels, which is important for a smooth row-unit ride and positive engagement with the soil. It is also crucial that the residue is removed ahead of the seed disc opener to prevent any hair-pinning of residue. Emergence issues and pest damage can occur when the residue is pinned in the seed trench. Utilizing row cleaners and adjusting them properly can help mitigate these issues. Adding air cylinders to the row cleaners is an inexpensive and quick way to adjust them on the fly. Another advantage to using row cleaners is that they provide a more uniform furrow when it comes to moisture and temperature. Utilizing the Yetter 2967 row cleaners with 25 lb. of down pressure has resulted in the best yield gains.

EQUIPMENT	YETTER 2967 ROW CLEANERS
CROP	Soybean
<b>PFR PROVEN</b> ACRES TO PAY OFF	<b>800 ACRES</b> 16-Row Planter at \$12.00 Bu./A. Soybean
