## FOREWORD

You've just joined an exclusive but rapidly growing club.

For our part, we want to welcome you to the group and thank you for buying a Yetter product.

We hope your new Yetter products will help you achieve both goals-increase your productivity and increase your efficiency so that you may generate more profit.

This operator's manual has been designed into four major sections: Foreword, Safety Precautions, Installation Instructions and Parts Breakdown.

This **SAFETY ALERT SYMBOL** indicates important safety messages in the manual. When you see this symbol, be alert to the possibility of **PERSONAL INJURY** and carefully read the message that follows.

The word **NOTE** is used to convey information that is out of context with the manual text. It contains special information such as specifications, techniques and reference information of a supplementary nature.

The word **IMPORTANT** is used in the text when immediate damage will occur to the machine due to improper technique or operation. Important will

apply to the same information as specified by note only of an immediate and urgent nature.

It is the responsibility of the user to read the operator's manual and comply with the safe and correct operating procedure and to lubricate and maintain the product according to the maintenance schedule in the operator's manual.

The user is responsible for inspecting his machine and for having parts repaired or replaced when continued use of the product would cause damage or excessive wear to the other parts.

It is the user's responsibility to deliver his machine to the Yetter dealer who sold him the product for service or replacement of defective parts, which are covered by the warranty policy.

If you are unable to understand or follow the instructions provided in this publication, consult your local Yetter dealer or contact:

## WARRANTY

Yetter Manufacturing warrants all products manufactured and sold by it against defects in material. This warranty being expressly limited to replacement at the factory of such parts or products as shall appear to be defective after inspection. This warranty does not obligate the Company to bear cost of labor in replacement of parts. It is the policy of the Company to make improvements without incurring obligations to add them to any unit already sold. No warranty is made or authorized to be made, other than herein set forth. This warranty is in effect for one year after purchase.

Dealer \_\_\_\_\_

**Yetter Manufacturing warrants its own products only and cannot be responsible for damages to equipment on which mounted.**

 **SAFETY**

**A brief description of signal words that may be used in this manual:**

**CAUTION:** Used as a general reminder of good safety practices or to direct attention to unsafe practices.

**WARNING:** Denotes a specific potential hazard.

**DANGER:** Denotes the most serious specific potential hazard.

## **SAFETY PRECAUTIONS**

You can make your farm a safer place to live and work if you observe the safety precautions given. Study these precautions carefully and insist that they be followed by those working with you and for you.

Finally, remember this: an accident is usually caused by someone's carelessness, neglect, or oversight.

 **WARNING**

Never clean, lubricate or adjust a machine that is in motion. Always lower or block the implement before performing service.

If machine must be serviced in the raised position, jack or block it up to prevent it from accidentally falling and injuring someone.

Do not allow riders on the tractor or implement.

Use speeds and caution dictated by the terrain being traversed. Do not operate on any slope steep enough to cause tipping or loss of control.

Be sure all personnel are clear of the immediate area before operating.

Read and understand the operator's manual and require all other persons who will operate the equipment to do the same.

Be familiar with all tractor and implement controls and be prepared to stop engine and implements quickly in an emergency.

 **CAUTION**

Consult your implement and tractor operator's manual for correct and safe operating practices.

Beware of towed implement width and allow safe clearance.

**FAILURE TO HEED MAY RESULT IN PERSONAL INJURY OR DEATH.**

# SINGLE ARM COULTERS

## INSTALLATION

1. Assembly 3/8 x 2-1/2" roll pin into hole closest to end of 1-1/2" diameter shank, leaving approximately equal amount protruding out each side. Note: offset shanks require that you perform step 2 first then step 1.
2. Insert lock collar into pivot casting and slide shank up through casting and lock collar. If you wish to lock coulters from pivoting, slide roll pin into slots in casting. If you wish to let coulters pivot, do not align roll pin with casting slots, but slide shank up till roll pin contacts casting surface. Install and tighten 5/8 x 1" setscrew in lock collar to 110 ft. lb. torque maximum.
3. Mount 17" blade loosely to hub using four 1/2 x 1-1/2" carriage bolts, lock washers and nuts.
4. Mount fertilizer knife and spacer block to rear support arm using two 1/2 bolts lock nuts. Place shims between 2995-309 – Spacer Block and support arm as required to align knife point with blade.
5. **Center blade on hub** by rotating blade and watching clearance between knife and blade. Slide blade on hub as required until clearance varies no more than 1/8" when blade is rotated one complete revolution. Tighten four 1/2" nuts. If blade-wobble is excessive, check for burrs on hub mounting surface and remove if necessary.
6. Adjust knife clearance to blade **as close as possible**. The high point of the blade should **just** clear the knife as blade is rotated. Be sure blade rotates freely then tighten two 1/2" locknuts to 120 ft. lb. Re-check clearance, by rotating blade one full revolution, after all bolts are tightened.
7. Assemble clamp components loosely to planter front bar as shown in parts view of appropriate clamp.
8. Position coulters clamps either toward the inside or outside of the planter openers on each side of the planter to equalize draft. Tighten four 1/2" nuts to secure the clamps.
9. Install coulters on planter by inserting shank up through clamps and tightening 5/8 x 1" setscrews.
10. Install 5/16 x 2-1/2" cotter pins in all vertical 1-1/2" diameter shanks. This cotter pin prevents loss of coulters should the clamp setscrews work loose. Cotter pin can be installed between clamp castings or on top, above top casting depending on the shank.
11. Set coulters depth by loosening setscrews in clamp castings. For John Deere 7000 front fold planters there may not be enough up adjustment to operate coulters at proper depth, not more than hub deep. Not all toolbars on John Deere planters operate at the same height. If necessary, cut off top of 1/12" diameter shank to allow proper adjustment.

## INSTALLATION

12. On John Deere 7000 front fold planters there are two hoses that may interfere with coulter operation. Loosen hydraulic fittings and swivel hoses up out of the way to provide clearance when coulter flexes up.
13. If you have elected to let coulter swivel, set lock collar to allow swivel in one or both directions as required. If you have elected to hold coulter rigid, set coulter straight with the direction of travel. Tighten set screw to 110 ft. lb. torque maximum.
14. Set spring tension by adjusting 3/4" lock nut until 1/8" of threads are exposed above the nut. Tighten 3/4" locknut if greater spring pre-load is required. NOTE: This will reduce vertical movement of coulter.
15. **NEVER** mount coulters under planter drive shaft to allow coulter blades to contact shaft when an obstacle is struck. Coulters must be mounted so blade can always flex up and clear drive shaft.

**NOTE: Dry fertilizer must be free of chunks greater than 1/4" in size to prevent plugging. Yetter recommends using screened fertilizer or running fertilizer through screen when hoppers are filled. Clean hoppers thoroughly at the beginning of season to prevent plugging problems.**

**The rubber dry fertilizer tube may appear to be 'stretched' when the planter is in the transport position. This does not affect operation of the planter and should not be detrimental to the fertilizer tube.**

## OPERATION

Yetter Model Generation III fertilizer coulters are designed to apply fertilizer 3" to 5" deep. See your fertilizer dealer for recommended depth and distance away from row for your particular fertilizer. A popular placement setting is 2" below and 2" away from the seed. High deposit rates require the fertilizer to be placed farther away from the row to avoid crop "burn".

The coulter can be set up to swivel or not swivel as required. By not allowing the coulter to swivel, the distance between seed and fertilizer varies less when planting on contour.

When mounting Model Generation III coulters on 3-point or 2-point hitch planters, the coulters should be set up to swivel, particularly if a 4-wheel drive tractor is used. This reduces the side load on the coulter during operation. It is preferable to allow the coulter to swivel.

**IMPORTANT: For proper operation, the planter frame must operate level and at the correct height, usually 20" – 22" while in operation.**

In hard no-till conditions the desired operating depth may not be possible. Tighten spring nut to maintain depth if spring is flexing rather than lower coulter to obtain maximum depth.

Planter weight may limit operating depth in hard conditions, particularly with mounted or semi-mounted planters. Be sure planter has enough weight to keep drive wheels on the ground during operation or plant populations can be drastically affected.

# OPERATION

1. Set coulter blades to run vertical to ground. Operation depth and blade wear can be affected if coulter is mounted crooked. If coulters are set-up to not swivel be sure they run straight with the direction of travel.
2. After a few hours use, check all bolts and setscrews for tightness.
3. After a few days use, check coulter hubs for loose bearings. There should be no end play in the hub bearings to allow it to wobble. If necessary, remove hub cap and cotter pin, adjust slotted nut to remove wobble, re-insert cotter pin and replace hub cap.
4. **KNIFE ADJUSTMENT IS CRITICAL.** Adjust knife-blade clearance regularly, see page 9.

An optional knife scraper, Part #2970-133 or 2976-133 is available to reduce the frequency of adjustment on the fertilizer coulter knife. In addition this allows better operation in tough conditions such as freshly disked soils with abundant trash in the top four inches of loose soil.

NOTE: A 'bump' will appear behind knife scraper, on blade where protected, this must be ground off periodically to maintain correct knife-blade clearance.

5. **BLADE WEAR** can affect operation in loose trash conditions. If knife adjustment does not stop plugging problems, it may be necessary to replace blade.
6. **Dry fertilizer must be free of chunks greater that 1/4" in size to prevent plugging. Yetter recommends using screened fertilizer or running fertilizer through screen when hoppers are filled. Clean hoppers thoroughly at the beginning of season to prevent plugging problems.**

NOTE: The rubber dry fertilizer tube may appear to be 'stretched' when the planter is in the transport position. This does not affect operation of the planter and should not be detrimental to the fertilizer tube.

# MAINTENANCE

## LUBRICATION

**DANGER:** Always install safety lock-ups or lower the planter to the ground before working on the machine. Lubricate at frequency indicated with a multi-purpose type grease.

**DANGER:** Always install all safety lock-ups and safety lock pins before working under the toolbar.

1. Raise the toolbar until it is clear off the ground. Remove the gauge wheel and the blade. Remove the hubcap, cotter pin, slotted nut and washer from the spindle shaft assembly.
2. Pull the coultter spindle shaft assembly from the hub. Remove bearing cones and cups and discard if bearings are being replaced. Clean hub and dry. Remove bearings only and not cups of re-packing.
3. Wash the old grease from the hub, bearing cups, coultter spindle shaft, seal, and bearing cones. Inspect the condition of bearing cups and cones.
4. Apply #2 multi-purpose lithium grease on each bearing. Make sure the space around each roller is filled. Lubricate the bearing cups.
5. Position the bearing in the cup and install the seal. Lubricate the seal lips and proceed with re-assembly of the removed parts including the blade. Blade bolt torque is 90 to 96 ft. lbs.
6. Install outer bearing, washer, and slotted nut. Tighten the slotted nut to 150 in. lbs. while rotating the blade or until a definite drag is felt when the blade is turned by hand. Tighten the nut one slot position to line up the cotter pin hole with a slot. Secure the nut with a new cotter pin.

## KNIFE ADJUSTMENT

CORRECT

CORRECT

INCORRECT

INCORRECT

S 286

The adjustment of knife clearance to the blade is critical to trouble free operation of the fertilizer coupler, in certain conditions the coupler can "plug" in just a few feet if not correctly adjusted.

1. The disc blade **must** run concentric. Adjust by loosening four hub nuts and centering the blade.
2. Set knife to rub slightly on blade, especially at bottom of knife. See illustrations above. Tighten lock nuts securely.

## TROUBLESHOOTING

<u>Problem</u>	<u>Cause</u>	<u>Solution</u>
Setting coulter	Planter not set correctly	Ensure that in operation the planter frame is at correct height (20"-22") and level the toolbar. See opposite page.
Trash plugging	Excessive knife-blade clearance	Check and adjust knife-blade clearance. See page 9.
	Knife not correctly aligned behind blade	Use shims to align knife behind blade
Blade not penetrating	Insufficient coulter spring pressure	Tighten coulter spring locknut down 1" further
	Coulter incorrectly installed	Adjust height of coulter by sliding shank down
Spring not deflecting	Excessive spring pressure	Back off coulter spring locknut to 1/8" of thread exposed
Fertilizer too deep	Spring not deflecting	Back off coulter spring locknut to 1/8" of thread exposed
	Coulter incorrectly installed	Adjust height of coulter by sliding shank up
	Lack of depth control	Install gauge wheel kit, part no. 2975-120
	Planter frame too low	Raise planter frame to correct height
Fertilizer too shallow	Blade not penetrating	Tighten coulter spring locknut down 1" further
	Coulter incorrectly installed	Adjust height of coulter by sliding shank down
Fertilizer will not flow	Plugged fertilizer tubes	Check for plugged fertilizer tube openings on knife
		Check for plugged fertilizer delivery tubes on planter
Blade not rotating properly	Loose soil	Coulter works best in firmer soil conditions

# NOTES

# Our name Is getting known

Just a few years ago, Yetter products were sold primarily to the Midwest only. Then we embarked on a program of expansion and moved into the East, the South, the West and now north into Canada. We're even getting orders from as far away as Australia and Africa.

So, when you buy Yetter products . . .you're buying a name that's recognized. A name that's known and respected. A name that's become a part of American agriculture and has become synonymous with quality and satisfaction in the field of conservation tillage.

Thank you.
