Adjustments: Position brackets to carry front of chain about 3"-4" above soil. Securely tighten hardware. For best soil leveling, keep front end of the chain as low as possible while maintaining clearance above the soil for the bracket ends.

NOTE: As with any type of furrow closing device it is advisable to do in field checks & make adjustments as necessary. There's no substitute for visual inspection to verify that seed is being properly placed. Careful attention is required when using herbicide and/or insecticide, consult your chemical provider for compatibility.
