YETTER

FOREWORD

You've just joined an exclusive but rapidly growing club.

For our part, we want to welcome you to the group and thank you for buying a Yetter product.

We hope your new Yetter products will help you achieve both goals-increase your productivity and increase your efficiency so that you may generate more profit.

This operator's manual has been designed into four major sections: Foreword, Safety Precautions, Installation Instructions and Parts Breakdown.

This **SAFETY ALERT SYMBOL** indicates important safety messages in the manual. When you see this symbol, be alert to the possibility of **PERSONAL INJURY** and carefully read the message that follows.

 **DANGER:** Indicates an imminently hazardous situation which, if not avoided "will" result in death or serious injury. This signal word is to be limited to the most extreme situations

 **WARNING:** Indicates a potentially hazardous situation which, if not avoided, "could" result in death or serious injury.

 **CAUTION:** Indicates a potentially hazardous situation, which if not avoided, "may" result in minor or moderate injury. It may also be used to alert against unsafe practices.

 **NOTICE:** Indicates information considered important, but not hazard related (e.g., messages relating to property damage).

It is the responsibility of the user to read the operator's manual and comply with the safe and correct operating procedure and to lubricate and maintain the product according to the maintenance schedule in the operator's manual.

The user is responsible for inspecting his machine and for having parts repaired or replaced when continued use of the product would cause damage or excessive wear to the other parts.

It is the user's responsibility to deliver his machine to the Yetter dealer who sold him the product for service or replacement of defective parts, which are covered by the warranty policy.

If you are unable to understand or follow the instructions provided in this publication, consult your local Yetter dealer or contact:

YETTER MANUFACTURING CO.

WARRANTY POLICY

Yetter Manufacturing warrants all products manufactured and sold by it against defects in material. This warranty being expressly limited to replacement at the factory of such parts or products as will appear to be defective after inspection. This warranty does not obligate the Company to bear cost of labor in replacement of parts. It is the policy of the company to make improvements without incurring obligations to add them to any unit already sold. No warranty is made or authorized to be made, other than herein set forth. This warranty is in effect for one year after purchase.

Model Number: _____

Serial Number: _____

Dealer : _____

The serial and model numbers are located on the top of the left hitch plate.

Yetter Manufacturing warrants its own products only and cannot be responsible for damage to equipment on which mounted.

SAFETY PRECAUTIONS

A brief description of signal words that may be used in this manual:

DANGER: Indicates an imminently hazardous situation which, if not avoided “will” result in death or serious injury. This signal word is to be limited to the most extreme situations.

WARNING: Indicates a potentially hazardous situation which, if not avoided, “could” result in death or serious injury.

CAUTION: Indicates a potentially hazardous situation, which if not avoided, “may” result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE: Indicates information considered important, but not hazard related (e.g., messages relating to property damage).

Consult your implement and tractor operator’s manual for correct and safe operating practices. Be aware of towed implement width and allow safe clearance.

Safety decals are placed on the implement to alert the operator and others to the risk of personal injury or unsafe operation during normal operations and servicing.

1. The safety decals must be kept clean and in good condition to ensure that they are legible.
2. Safety decals must be replaced if they are missing or illegible.
3. When components are replaced during repair or servicing, check that the new components include the necessary safety signs.
4. Replacement safety decals may be obtained from your local dealer.

WARNING

Read these instructions carefully to acquaint yourself with the Equipment. Working with unfamiliar equipment can lead to accidents.

Never park the equipment on a steep incline or leave the equipment running unattended.

Never clean, lubricate or adjust a machine that is in motion.

Always check that straps are secure.

Make sure latches are in pinned position when moving equipment.

Do not allow children to operate this equipment.

Do not allow riders on the equipment, trailer and/or pick-up.

Use speed and caution dictated by the terrain being traversed. Do not operate on any slope steep enough to cause tipping or loss of control.

Read and understand the operator’s manual and require all other persons who will operate the equipment to do the same.

If operating on public roadways, where legal, be certain all lighting is operating properly and observe all traffic laws.

Beware of increased stopping distances and control effort when operating with implements attached.

Be familiar with all controls and be prepared to stop equipment quickly in an emergency.

FAILURE TO HEED MAY RESULT IN PERSONAL INJURY OR DEATH.

3500 SERIES HYDRAULIC ASSEMBLY

ASSEMBLE HINGE LEVERS AS FOLLOWS

1. Drive a 3/8" x 2-1/2" roll pin into one end of each of 4 hinge pins.
2. On one wing of hoe assemble 1" washer on hinge pin, push pin thru near hole in hinge, insert hinge lever, push pin thru other hole in hinge, assemble another 1" washer and roll pin.
3. On other end of hinge lever assemble a 1" washer on hinge pin, put thru a wheel, push rod clevis of a hydraulic cylinder, hinge lever, other side of clevis, wheel, washer, and secure with another 3/8" roll pin.
4. On the butt end of cylinder remove 1 hairpin clip and the clevis pin, extend the cylinder and fasten to the cylinder bracket with the clevis pin and the hairpin clip. Check spacing between hinge lever and hinge bushing; (opposite zerk) and set to 1/8" to 3/16" spacing by removing clevis pin and turning cylinder into or out of the rod end clevis. Tighten clevis-clamping bolt.
5. Repeat 2, 3, and 4 for the remaining wing.
6. Lubricate the o-ring on each of the restricted 90-degree fittings and install into the cylinder ports. **DO NOT OVER TIGHTEN AND DISTORT THE METAL BACK-UP WASHER.** Position the fitting by turning it out (counter clockwise) to a maximum of one complete turn and tighten the jam-nut.
7. There are four hose sizes as follows:
 1. 1/4" hose (short) 1 pc.
 2. 1/4" hose (medium) 2 pcs.
 3. 1/4" hose (long) 1 pc.
 4. 3/8" hose, 2 pcs.
8. Connect a short and medium hose on opposite arms of a "T" fitting.
9. Connect a medium and long hose on opposite arms of a second "T".
10. Position the short hose assembly on the toolbar with "T" on the operators left of the hitch assembly, position the long hose assembly in the same manner, connect short hose ends to the inner ports, the longer assembly to outer ports.
11. Connect the 4ft. 3/8" hoses to the remaining "T" ports and tighten **ALL** connections.

Adapters are provided for the hoses to connect to standard 3/4-16 straight thread quick coupler tips such as Case-IH part no. 1285718* or Deere part no. AR945222.

12. Using the cable ties furnished, tie the outer port hoses to the lower ends of each cylinder and the hose to the toolbar on each side of the "T"s and at 2 to 3 foot intervals between.

13. **NOTICE:** Be sure to cycle the hydraulic cylinders **before** attaching them to the folding wings. This removes air from the hoses and insures smooth wing operation.

CAUTION
STAND CLEAR OF FOLDING WINGS!

HYDRAULIC ASSEMBLY

FIGURE 1

ASSEMBLY

SCREEN ASSEMBLY

1. Assemble the screen brackets to the screen with four 3/8 x 1" bolts, lock washers, and nuts.
2. Mount the screen assembly to the main frame as shown with two u-bolts, lock washers, and nuts. Additional screens can be ordered if desired.

CAUTION: DO NOT OPERATE ROTARY HOE UNLESS SCREEN IS SECURED AND PROPERLY INSTALLED.

SMV ASSEMBLY

1. Mount SMV emblem as shown with point of triangle up as near operators left of center as possible. Face so emblem is visible from rear of equipment.

ASSEMBLY

GAUGE WHEELS

Frame gauge wheels maintain the rotary hoe frame at a constant level in respect to the ground contour, which helps insure uniform penetration of the hoe wheels.

Mount the frame gauge wheels as shown, location each wheel an equal distance from the center of the main frame. Gauge wheels should run outside the tractor wheel tracks.

To tighten wheel bearing, remove the hubcap and cotter pin. Tighten the slotted nut until there is a slight drag on the bearing, while turning the wheel. Then loosen or back off the slotted nut one slot and insert the cotter pin. There should be a slight drag on the bearing following adjustment. Reinstall the hubcap.

CAUTION: ON 3500 MODELS, BEFORE ACTIVATING FOLDING HINGE CHECK FOR OBSTRUCTIONS, ESPECIALLY CHECK GAUGE WHEEL POSITIONS TO BE SURE THAT GAUGE WHEELS ARE SET TO CLEAR TRACTOR AND OPERATOR.

CAUTION: CLEAR ALL PERSONNEL FROM AREA BEFORE FOLDING OR UN-FOLDING TOOLBAR.

OPERATION

ROTARY HOE PREPARATION

BOLTS AND NUTS:

Before starting to work, check all nuts and bolts for tightness.

HOE WHEELS:

Check all hoe wheels for straightness. Replace if necessary.

NOTE: ¼" of "RUNOUT" is acceptable.

LUBRICATION:

The basic Rotary Hoe requires no lubrication. If your hoe is equipped with gauge wheels, repack the wheel bearings once a year with multi purpose lithium base grease. Hinges on folding hoes should be greased regularly.

TRACTOR PREPARATION

WHEEL SPACING:

Set the tractor wheels for the desired row spacing so the wheels are centered between the rows. The distance from center of tractor to the center of the tire should be the same on each side. Refer to your tractor operator's manual for correct inflation and ballast information of the tractor.

SWAY BLOCKS:

Place the sway blocks in the wide setting during transport to prevent any swaying of the hoe.

DRAWBAR POSITION:

Place the drawbar in the short, center position to provide maximum clearance between rear of drawbar and rotary hoe.

LIFT LINKS:

Adjust the length of lift links to maximum length. Refer to Tractor Operator's Manual. Keep an adequate distance between the tractor tires and rotary hoe toolbar. If your hoe is equipped with gauge wheels, adjust the lift link pins to allow lateral float. If gauge wheels are not used, adjust prevent any lateral float movement.

ATTACHING ROTARY HOE TO TRACTOR

HITCH ASSEMBLY

The rotary hoe is shipped with mast and hitch pin bushings assembled for CAT III or IV hitches. Remove bushings as required of your tractor.

Place sleeves and spacers in position to fit your hitch. The lower hitch plates are adjustable to fit your tractor's spacing.

CAUTION: BEFORE ATTACHING ROTARY HOE TO TRACTOR, BE SURE HITCH PINS ARE COMPLETELY ASSEMBLED TO MATCH YOUR TRACTOR HITCH.

TRACTOR WITHOUT QUICK COUPLER:

Attach rotary hoe to tractor with draft links to lower hitches.

Adjust the center link or extend the draft links to make hookup easier. Raise parking stand and place in upper position.

TRACTOR WITH QUICK COUPLER:

Lower the 3-point hitch so the upper jaw of the Quick Coupler passes under the spacer between the hoe mast plates. This allows lower jaws to pass under the hoe hitch pins. Back tractor up until coupler jaws are under their respective pins and raise hitch.

CAUTION: MAKE CERTAIN THAT CENTER LINK AND QUICK COUPLER ARE LOCKED AND LOCK PINS ARE PROPERLY INSTALLED BEFORE MOVING ROTARY HOE.

I114

FIELD OPERATION

PRE-OPERATION CHECK LIST:

Use this checklist each time you operate the hoe in the field. It will help you obtain satisfactory field operation quickly.

1. Tractor sway blocks in upper position.
2. Center link adjusted for level frame in field operation.
3. Tractor lift links set in lateral float.
4. Tractor rockshaft control lever set in "zero"
5. Check hoe for loose or missing parts. Tighten hardware where necessary.
6. Bent hoe teeth straightened or replaced.
7. Hitch pins fastened and correct spacers used.
8. Quick couplers locked.
9. Adequate ballast added to front of tractor.

**IMPORTANT: NEVER BACK UP WITH ROTARY HOE IN THE GROUND.
NEVER TURN WITH THE HOE IN ITS DOWN POSITION.**

OPERATING SPEED:

An operating speed of 5 to 8 mph will normally provide the best results. Higher speeds tend to increase the teeth penetration.

MAIN FRAME HEIGHT:

The mainframe height during field operation will normally be about 22 inches to bottom of frame.

Without gauge wheels, set the tractor rockshaft control lever to obtain the desired frame height.

With frame gauge wheels, put the rockshaft control lever all the way forward to lock "it" in the float position, which will enable the frame gauge wheels to maintain the frame at a uniform height from the ground.

LEVELING MAIN FRAME

Adjust lift links and center link as necessary to make hoe level and perpendicular to the ground.

Before activating/folding hinge check for obstructions, especially check gauge wheel positions to ascertain proper tractor and cab clearance.

NOTE: If gauge wheels are to be used, make leveling adjustments after gauge wheels are installed.

FIELD OPERATION

PARKING THE ROTARY HOES

3400 HOES

Lower the parking stand. Lower rotary hoe and loosen center link if necessary. Release the latch levers and quick coupler, or raise center link latch handle and remove hitch pins, then move tractor.

3500 HOES

Fold wings to the down position unless rear parking stand is used. Lower the parking stands. Lower the rotary hoe and loosen center link if necessary. Release the latch levers and quick coupler, or raise center link latch handle and remove hitch pins, then drive tractor away.

CAUTION: NEVER UNHOOK FROM A FOLDED ROTARY HOE UNLESS REAR PARKING STANDS ARE USED.

TRANSPORTING THE HOES

3400 HOES

To change from field to transport position, raise the hoe. Make certain the SMV symbol is in place before transporting. DO NOT exceed 15 mph during transport.

3500 HOES

To change from field to transport position, raise the hoe, and then fold. Make certain there is adequate clearance for the wings to fold without hitting obstructions. Check gauge wheel positions for adequate tractor and cab clearance. Make certain the SMV symbol is in place. DO NOT exceed 15 mph during transport.

CAUTION: STAND CLEAR OF FOLDING WING!

CAUTION: ALWAYS FOLLOW ALL STATE, FEDERAL, AND LOCAL LAWS WHEN TRANSPORTING ROTARY HOE ON PUBLIC ROADS.

3400-170A MIN-TILL CONVERSION

ISO3400-170A

ITEM	PART NO.	DESCRIPTION	QTY
1	2502-323	5/8-11 X 2-3/4 CAP SCREW GRADE 5	1
2	2520-152	1/4-20 LOCK HEX NUT	2
3	2520-459	5/8-11 LOCK HEX NUT GRADE 5	1
4	2570-481	U-BOLT	1
5	3400-229	MIN-TILL HOE ARM STOP	1
6	3400-231	MIN-TILL HOE ARM EXTENSION	1

This conversion kit increases the separation of the two rows of rotary hoe wheels improved residue flow through.

1. Attach 3400-229 "stop" to each rear wheel arm with small u-bolt.
2. Remove hoe wheel from existing rear arm.
3. Attach arm extension casting to rear arms with existing wheel bolt and nut.
4. Attach hoe wheel to end to extension casting with bolt and lock nut supplied.

CAUTION: On the 3500 Series Folding Hoes that are being equipped with the Mill-Till Conversion Kit (3400-170), the helper spring kit (3400-172) must be added to the seven min-till arms above the OSHA screen in the folding position. Failure to add helper spring will cause damage to the OSHA screen.

WING LOCK KIT INSTALLATION INSTRUCTIONS

3500-107 Wing Lock Kit is designed to fit Yetter 21', 28', 30', 34', 41', 46' and 54' Rotary Hoe Flat Folding Toolbars.

To prevent wings from floating up in certain operating conditions the Yetter Wing Lock Kit will hold the wings in horizontal position when desired. To allow the wings to float, simply retract the wing lift cylinders slightly. This allows complete operator control from the tractor seat to let the wings float up or to lock them down.

INSTALLATION:

1. Remove hinge levers and replace with 4100-205 hinge lever on 41' hoes unless hinge levers have a 21/32" dia. hole added to mount wing lock hooks.
2. Drill (2) 17/32" dia. holes (as shown) in hinge wheel ramp on each side of toolbar. (Holes are in strap after 3/1/82 mfg.)
3. Mount wing lock guides and wing lock tabs (as shown) with 1/2-13 x 1-1/2" hex head cap screws, lock washers, and nuts.
4. Mount wing lock hooks on hinge levers (as shown) using 3500-386 bushing, 5/8-11 x 4" hex head cap screw, flat washers, and lock nut. Be sure hooks pivot freely after bolt is tightened.
5. Level the wings with the lower existing screw adjustment to hold the wings straight with the center section.
6. Cycle cylinders, disconnected from hinge lever, to remove air from hydraulic system before folding wings.
7. Assemble cylinder and hinge wheels as shown.
8. Extend the wing lift cylinders until they bottom out. NOTE: This will cause the wing lock hooks to yield slightly as they are stretched into position.
9. Fold wings a few times slowly while watching the wing lock hooks to be sure they are operating properly.

PARTS IDENTIFICATION

INSTALLATION INSTRUCTIONS

1. Install trash guard to arm casting with trash guard tip towards rear of hoe using $\frac{1}{4}$ u-bolts, nuts and lock washers as shown. NOTE: Do Not tighten bolts at this time.
2. Set depth of hoe and adjust trash guards. Recommended setting: Tip of trash guard should be 1" to 1-1/2" from ground, depending on field conditions when hoe wheel is penetrating.
3. Tighten all u-bolts after adjusted.
4. The trash guard does not work on the Min-till Arm Extension Kit.

3400-147 – TRASH GUARD ASSEMBLY

KEY	QTY.	PART NO.	DESCRIPTION
1	1	3400-225	TRASH GUARD W.A.
2	2	2570-481	TRASH GUARD U-BOLT
3	4	2525-151	$\frac{1}{4}$ MED LOCKWASHER ZYD.
4	4	2520-151	$\frac{1}{4}$ -20 HEX NUT ZYD.

INSTALLATION INSTRUCTIONS

1. Install the torsion spring (#5) and anchor spring (#6) over existing spring and axle. Hook to spring bracket (#7).
2. Assemble the spring clamp casting (#3) and clamp plate (#2) to spring using $\frac{5}{16}$ x 1" bolt and nut inserted in clamp casting. Preset lower hook 2" to 3" in front of arm that it is being installed on. Tighten clamp then pull hook up on arm and spring tension is preset.

3400-172 – HELPER SPRING SHIP ASSEMBLY

TROUBLE SHOOTING

Problem	Cause	Solution
Premature bearing failure	Excessive strain on the hoe wheel bearings	<p>Don't turn with rotary hoe wheels on the ground</p> <p>Store the rotary hoe inside to help protect the bearings from freezing weather, moisture, blowing sand, and dirt</p> <p>Keep all wheel bolts tight. Check rotary hoe wheels for loose rivets and bent teeth. Check for bent arm castings</p>
Rotary hoe arm bending or breaking	Excessive strain on the arms and wheels	<p>Don't turn with the rotary hoe wheels on the ground</p> <p>Don't back the rotary hoe with wheels on the ground</p>
3500 Series Wings float up	Air in system	Check for air in hydraulic system and purge system
	Gauge wheels not properly adjusted	Check proper adjustment of wing gauge wheels
	Wing deflection not properly adjusted	Maintain center tool bar height above or parallel with outer wings
	Hinge levers not properly installed	<p>Check assembly of hinge levers</p> <p>Install 3500-107 Wing Lock Kit</p>
Hydraulic cylinders fail to operate properly (3500 model only)	Hydraulic system improperly installed	Check for correct assembly of the hydraulic system
	Air in system	Check for air in the hydraulic system and purge system
	Blocked restrictors	Check restrictors for malfunctions
Rotary hoe wheels plug with trash materials	Excessive trash conditions	<p>Decrease operating depth of hoe wheels and increase ground speed to create momentum so the hoe wheels may clean themselves</p> <p>On softer, mellow soils, decrease operating depth so that hoe wheels do not pickup trash material</p> <p>Install optional Min-Till Conversion Kit, (3412-3434-125)(3541or3546-125)</p> <p>Install optional trash guard (part no. 3400-147)</p>
Hoe wheels won't penetrate	Hard soil conditions	<p>Lower tool bar to maximize aggressiveness of rotary hoe</p> <p>Lengthen center link on tractor to tilt tool bar back to increase spring tension</p> <p>Install optional helper spring (part no. 3400-150)</p>
Rotary hoe wheels are too aggressive	Rotary hoe wheels running too fast	Slow tractor ground speed
	Rotary hoe wheels running too deep	<p>Decrease operating depth of rotary hoe wheels</p> <p>Install toolbar gauge wheels except on model 3412 and 3415</p>

Our name Is getting known

Just a few years ago, Yetter products were sold primarily to the Midwest only. Then we embarked on a program of expansion and moved into the East, the South, the West and now north into Canada. We're even getting orders from as far away as Australia and Africa.

So, when you buy Yetter products . . .you're buying a name that's recognized. A name that's known and respected. A name that's become a part of American agriculture and has become synonymous with quality and satisfaction in the field of conservation tillage.

Thank you.
